

HIEU DUONG MINH

Flutter Developer

0866904533 | hieuduong1704@gmail.com | Phu Dien, Hanoi, Vietnam | DOB: 17/04/2002
Portfolio: minhhieuduong.site | linkedin.com/in/minh-hieu-duong | gitlab.com/minhieuduong

SUMMARY

Flutter Developer with over 1 year of experience, currently Co-founder & Lead Developer of Capple - AI Calorie Tracker, an AI-powered calorie tracking app with paying users on the App Store and Google Play. Experienced across the full stack, from Flutter and Node.js backends to CI/CD and app release management. Looking to join a professional product team to strengthen my skills in architecture and testing, and to grow deeper into native development (Kotlin, Swift).

TECHNICAL SKILLS

Mobile: Flutter, Dart, Riverpod, Clean Architecture, Dio/REST API, Swift (basic)

Backend & Database: Node.js/Express, NestJS, REST API, Prisma, PostgreSQL, MongoDB, Redis, OpenAI API

Web: ReactJS, Redux, TanStack Query, Tailwind CSS, Three.js, TypeScript, JavaScript (ES6+), HTML/CSS

Services: Firebase (Authentication, Analytics), RevenueCat, SharedPreferences

CI/CD & Release: GitLab CI/CD (self-configured), environment variables, TestFlight, App Store Connect, Google Play Console

Automation & Auth: Puppeteer (web crawling), Google OAuth, WalletConnect, JWT

Testing & Debugging: Unit Testing, Automated Testing, Flutter DevTools

Tools: Git, GitLab, VS Code, Android Studio, Xcode, Postman, ESLint

Principles: OOP, SOLID

WORK EXPERIENCE

Co-founder & Lead Developer

12/2025 - Present

Startup projects: Capple AI Calorie Tracker and WeDream AI

Capple - AI Calorie Tracker ([capple.app](#) · [Google Play](#) · [App Store](#))

Mobile app that analyzes food photos to estimate calories and nutritional values, helping users track their daily intake. Team of 5 (1 designer, 2 investors, 1 DevOps); responsible for the entire mobile app, backend, infrastructure and releases.

- Main developer of the entire Flutter app using Clean Architecture, Riverpod and REST API/Dio; implemented the UI based on the designer's mockups.
- Developed the frontend with Flutter and the backend with Node.js and MongoDB.
- Integrated GPT-4o mini, Firebase Authentication, Firebase Analytics and SharedPreferences.
- Set up a GitLab CI/CD pipeline that automatically deploys when code is pushed to the dev branch; managed environment variables.
- Since 07/2026, took over full management of the app on App Store Connect and Google Play Console (releases, updates, metrics tracking) after the first release was handled by the investors.
- **Results (since 02/2026): 10K total users and 100+ in-app purchases.**
- Performed Unit Testing, Automated Testing, debugging and performance profiling with Flutter DevTools.

WeDream AI

Mobile app that uses AI to analyze and interpret dreams.

- Built the product from scratch: frontend with Flutter, backend with Node.js/MongoDB.
- Applied Clean Architecture and Riverpod, integrated REST APIs.
- Integrated GPT-4o mini to process and analyze dream content.
- Performed Unit Testing, debugging and performance profiling with Flutter DevTools.

Remote Frontend Developer

06/2026 - Present

Dogeland - Minecraft server network platform ([dogeland.vn](#))

TypeScript monorepo (Bun workspaces): React web app, NestJS API, shared Prisma/PostgreSQL schema.

- Built the entire frontend from scratch with React, TypeScript, Vite, Tailwind CSS and TanStack Query.

- Developed all user-facing pages: shop with categories and product pages, blog, forum, wiki, leaderboards, gift code redemption, and a player dashboard with playtime and spending charts (Recharts).
- Built the admin panel UI for managing servers, players, shop, ranks, gift codes, blog and forum.
- Built the authentication API (NestJS) shared with the in-game AuthMe plugin by reproducing its password hashing, so one account works in both game and web; added email confirmation and password reset via SMTP, JWT, and Discord OAuth2 for account linking and login.
- Built the payment API: integrated the PayOS gateway with webhook-based bank-transfer reconciliation and server-side transaction verification, plus promo codes and an admin approval flow.
- Rendered the server's Blockbench 3D models on the web with Three.js.

Remote Web Developer

01/2024 – 11/2025

Relabs Team (Web3/Crypto) – Remote

Redrop – Internal system for managing and automating airdrop campaigns

Phase 1 – Legacy system maintenance (01/2024 – 07/2024)

- Took over the existing Redrop web app (including smart contract and other blockchain features); focused on updating the codebase, maintenance and bug fixing.
- Identified the limitations of the old system (a single login shared by all users, no server or bot-condition management, no airdrop tracking or data crawling), which shaped the scope of the rebuild.

Phase 2 – Frontend rebuild & feature expansion (08/2024 – 11/2025)

- Rebuilt the entire frontend from scratch with a completely new UI, re-implementing all existing features; set up ESLint and coding conventions from day one. Extended the existing backend (REST API, Controller – Service – Repository) to support the new features.
- Built new modules: a Home dashboard, virtual machine (server) management, bot segments (per-bot conditions) and an airdrop list.
- Built account management (Twitter, Telegram, Discord, etc.): CRUD, grouping, filtering by tag/employee/server, Excel import/export, and per-bot permissions on each server.
- Replaced the shared single-account login with a multi-user authentication system: Google OAuth, WalletConnect and email sign-up verified by a 6-digit code sent via SMTP; unified identities by email so all login methods share one account and one data set without duplication.
- Designed Admin / Team Manager / User roles with data separated by group (Store); secured with JWT and bcrypt password hashing.
- Wrote a crawler (Puppeteer, Cheerio) that automatically fetches airdrop data from Cryptorank using only the project link; integrated the OpenAI API to batch-translate tasks into Vietnamese.
- Improved airdrop list loading speed with Redis caching and MongoDB indexing.

Flutter Intern – PHX Smart School

06/2023 – 12/2023

Projects: PHX Smart School, Vicostone VN

- Developed mobile UI with Flutter based on existing UI/UX designs.
- Integrated APIs, fetched and processed data for display on the client.

EDUCATION

Phenikaa University

2020 – 2026

Bachelor of Software Engineering – Awaiting graduation (expected 2026)
