SUMMARY

Mobile developer specializing in Flutter, with three years across mobile, backend and web. Co-founder and lead developer of Capple – AI Calorie Tracker, shipped to the App Store and Google Play and now serving **10,000+ users with 100+ paid in-app purchases**. Owns the full delivery path, from Clean Architecture and Riverpod clients to Node.js services and self-configured GitLab CI/CD store releases.

EDUCATION

Phenikaa University 2020 – 2026
Bachelor of Engineering in Software Engineering Hanoi, Vietnam
Graduation results expected November 2026.

PROFESSIONAL EXPERIENCE

Capple – AI Calorie Tracker Dec 2025 – Present
Co-founder & Lead Mobile Developer Hanoi, Vietnam
Early-stage startup building consumer AI mobile apps. Team of five; own the mobile apps, backend, infrastructure and store releases.

- Architected and built the entire Capple Flutter application on Clean Architecture, Riverpod and Dio/REST, turning designer mockups into production UI now used by **10,000+ users driving 100+ paid in-app purchases**.
- Engineered the Node.js and MongoDB backend and integrated GPT-4o mini to analyze food images and return nutritional estimates.
- Integrated Firebase Authentication, Firebase Analytics and RevenueCat to run sign-in, behavioral tracking and the subscription purchase flow.
- Automated delivery through a self-configured GitLab CI/CD pipeline that builds and deploys on every push to the dev branch, with environment variables managed per release channel.
- Own release management on App Store Connect and Google Play Console — versioning, store listings, rollouts and metrics — assumed from the founding investors in July 2026, and safeguard stability through unit and automated testing with Flutter DevTools profiling.
- Shipped a second product, **WeDream AI**, from scratch on the same Flutter and Node.js stack, reusing the established architecture and AI pipeline to shorten time to launch.

Dogeland Jun 2026 – Present
Frontend Developer (Part-time) Remote
Minecraft server network platform built as a TypeScript monorepo: React web app, NestJS API and shared Prisma/PostgreSQL schema.

- Built the complete user-facing web app from scratch in React, TypeScript, Vite, Tailwind CSS and TanStack Query, covering shop, blog, forum, wiki, leaderboards, gift-code redemption and a player dashboard charting playtime and spending.
- Engineered a NestJS authentication API that shares credentials with the in-game AuthMe plugin by reproducing its password hashing, so a single account works in game and on web, extended with SMTP email confirmation, password reset, JWT and Discord OAuth2.
- Integrated the PayOS gateway with webhook-driven bank-transfer reconciliation, server-side transaction verification, promotion codes and an administrator approval flow.
- Delivered the administration panel for servers, players, shop, ranks, gift codes, blog and forum, and rendered the network's Blockbench 3D models in-browser with Three.js.

Relabs Team Jan 2024 – Nov 2025
Web Developer Remote
Redrop – internal platform for managing and automating Web3 airdrop campaigns.

- Inherited the legacy application, diagnosed its structural limits, then rebuilt the frontend from the ground up with an entirely new interface at full feature parity, establishing ESLint and coding conventions from day one.
- Replaced a single shared login with multi-user authentication over Google OAuth, WalletConnect and SMTP six-digit email verification, unifying identities by email so every sign-in method resolves to one account and one dataset.
- Designed Admin, Team Manager and User roles with group-level data isolation secured by JWT and bcrypt, and built social account management for Twitter, Telegram and Discord with CRUD, grouping, filtering, Excel import/export and per-bot permissions.
- Automated airdrop ingestion with a Puppeteer and Cheerio crawler that populates campaigns from a single Cryptorank link, batch-translated tasks through the OpenAI API, and accelerated list loading with Redis caching and MongoDB indexing.

PHX Smart School Jun 2023 – Dec 2023
Flutter Developer Intern Hanoi, Vietnam

- Implemented mobile interfaces in Flutter from established UI/UX designs and integrated REST APIs for the PHX Smart School and Vicostone VN applications.

SKILLS & LANGUAGES

Mobile: Flutter, Dart, Riverpod, Clean Architecture, Dio/REST, Firebase (Authentication, Analytics), RevenueCat, Swift (basic)
Backend & Data: Node.js/Express, NestJS, TypeScript, PostgreSQL/Prisma, MongoDB, Redis, OpenAI API
Web: React, Redux, TanStack Query, Tailwind CSS, Three.js, Puppeteer
Release & Quality: GitLab CI/CD, App Store Connect, Google Play Console, TestFlight, unit and automated testing, Flutter DevTools, Git
Languages: Vietnamese (native), English (technical reading and writing)
